Co-operatives and SDGs

A web and app-based approach
to impact monitoring.

Core Values

- Passion from the ground up
- Always try new things, spread new ideas, develop and innovate
- Save the world through education, inspiration & capacity building
- Always make something that will make you and those around you proud
- We nurture and affirm the infinite potential of mankind

What did we see?

Almost everywhere in the Philippines, there is **at least one co-operative** in every town, municipality or city.

There is **continuing government support** toward MSMEs, and by extension co-operatives.

International Lessons

Through various visits to other ASEAN countries, we were able to learn key insights especially in the importance of monitoring.

- For instance, a properly monitored production chain can promote increased cooperation among co-operatives (e.g. raw material coop can link with a manufacturing coop miles away)
- It can also help strengthen the co-operative sector by providing near real-time data on current and projected product yield and service offerings (e.g. seasonal products for agricultural co-operatives)

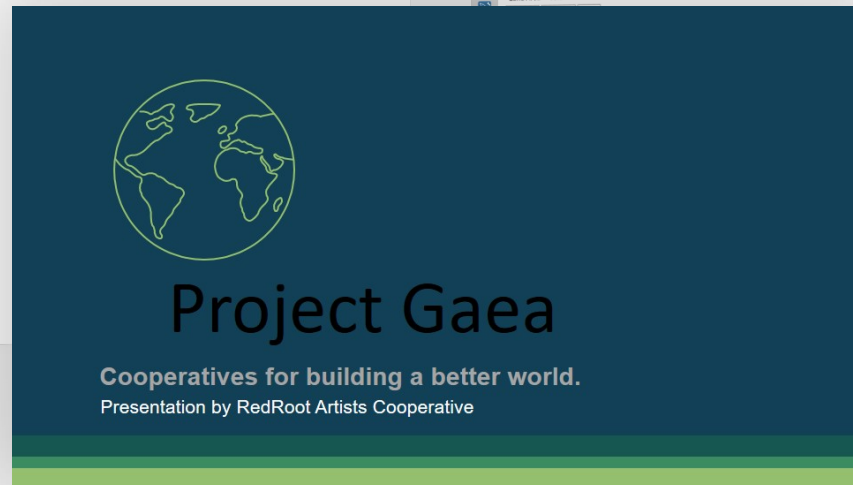

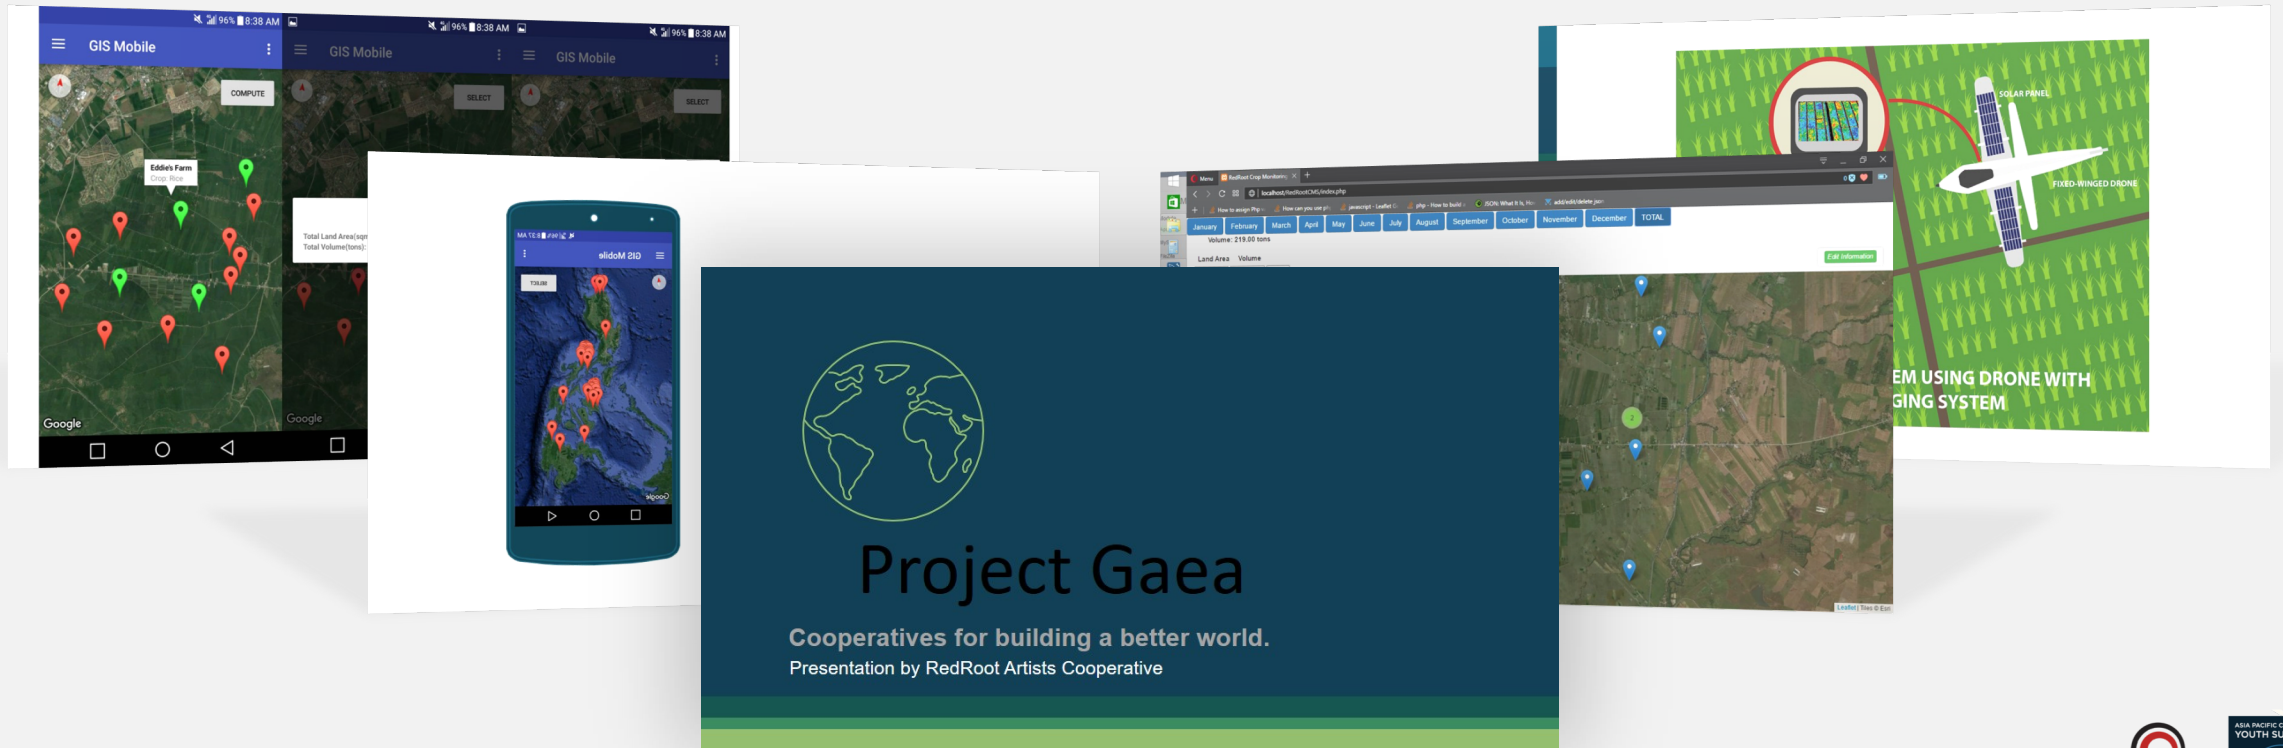

The SDGs are
our guide.

Research & Development

We started prototyping and developing a **crop monitoring system** by using existing app, web, and drone technologies. We've done the initial groundwork - initial app development, research, and presentations to some stakeholders.

Co-operative enterprises help build a better world.

With this tool, we can now provide evidence-based data on the impact and contributions of the co-operative movement toward achieving the SDGs.

How can the
youth create a
better world?

Learning. Adventure. Networking.

“Nothing differentiates people as much as their respective attitudes towards the circumstances in which they live . Those who opt to make history and change the course of events themselves have an advantage over those who wait passively for the results of the change.”
